

# **“Avoid the New Year Hangover”**

## **By letting Dyna-Purge work for you over Christmas**

Christmas has always been a busy season for Dyna-Purge sales as many processors switch off for the holidays. Leaving Dyna-Purge in the barrel for shut down reduces the strain of expensive start up in the New Year.

It's a simple procedure to follow:-

- \* Empty the barrel of Polymer
- \* Clean the Hopper
- \* Add Dyna-Purge and fill the barrel
- \* Purge once and refill
- \* Switch off machine
- \* Go home and enjoy Christmas!
- \* Come back to work and re heat the machine
- \* When heats are reached purge out the Dyna-Purge
- \* Flush with Polymer and start production

Dyna-Purge is non chemical and non abrasive (No Glass) and works by expansion and aggressively scrubbing the metal surfaces. It is stable and requires no condition setting changes. Grades can be used for Injection Moulding Hot or cold runners, Profile and cable extrusion, Blow moulding, Blown and Cast Film Extrusion Powder coating and Colour Compounding.

Since pioneering Commercial Purging Compounds over 30 years ago Shuman Plastics Inc continues to develop and improve the Dyna-Purge products. CJP Sales Ltd are approaching the 3 years of distribution of Dyna-Purge in UK and Ireland and over 25 years of polymer distribution.

*Dyna-Purge is a Registered and Trade Marked product of Shuman Plastics Inc.*
