For whom it may concern

PVC CONVERSION TO PHTHALATE FREE

For many years there has been discussion and concern over the Ortho- Phthalate content in flexible PVC Compounds. More recently there have been issues with DOP plasticisers being listed under in the SVHC list for REACH. Doeflex and CJP now have a full range of DOP free grades and are pleased to advise that we are in the process of transferring all grades of flexible PVC to a Terephthalate plasticiser to meet this requirement.

The plasticiser change will not affect the processing or mechanical properties of your compound, as these grades have been in production for some time and have proved to be very successful.

New MSDS and Technical data sheets will be forwarded in due course. You will now be able to advise your customers that our grades are now Ortho- Phthalate Free and therefore fully compliant with REACH regulations.

Please do not hesitate to contact us should you require any further information.

Yours sincerely,

Richard Benyon
Technical Director

The data given above are typical results from laboratory tests. They do not form the whole or part of a specification. Since the conditions under which our products may be used are beyond our control, recommendations are made without a guarantee and customers should ensure that materials supplied are satisfactory for their requirements.
